VI. Read the passage, then decide if the statements that follow it are True or False.

We can develop alternative sources of energy, and unless we try we'll never succeed. Instead of burning fossil fuels we should be concentrating on more economic uses of electricity, because electricity can be produced from any sources of energy.

If we didn't waste so much energy, our resources would last longer. We can save more energy by conservation than we can produce for the same money. Unless we do research on solar energy, wind power, tidal power, hydroelectric plants... our fossil fuels will run out and we'll all freeze or starve to death.

Many countries are spending much more time and money on research because the energy from the sun, the waves, and the winds last forever. We really won't survive unless we start working on cleaner and safer sources of energy.

23. However we try, we'll never succeed in developing alternative sources of energy. _____

24. Electricity can be produced only from burning fossil fuels. _____

25. We'll all freeze or starve to death if we don't try to develop alternative sources of energy. _____
